

Customer Retention & Churn Analysis Dashboard

Business Insights and Recommendations Report

This report summarizes the findings from the Customer Retention & Churn Analysis Dashboard created using the Telco Customer Churn dataset.

Dashboard Summary

- Total Customers: Approximately 7,000 customers.
- Active Customers: Approximately 5,000 customers.
- Churned Customers: Approximately 2,000 customers.
- Churn Rate: Approximately 27%.

Key Insights

- Approximately 27% of customers have churned, indicating a significant retention challenge.
- Month-to-month contract customers have the highest churn, while one-year and two-year contract customers are more loyal.
- Fiber optic customers show the highest churn among internet service categories.
- Customers who churn have higher average monthly charges than retained customers, suggesting price sensitivity.
- Electronic check users experience the highest churn compared with other payment methods.
- Many customers leave during the early months of their subscription, while long-tenure customers tend to stay.

Business Recommendations

- Promote annual and long-term contracts through discounts and loyalty benefits.
- Investigate the reasons for high churn among fiber optic users and improve service quality or pricing.
- Target high-bill customers with personalized offers and retention campaigns.
- Provide incentives for customers using electronic checks to improve retention.
- Strengthen onboarding and customer engagement during the first six months of the customer journey.
- Introduce loyalty programs and rewards for long-term subscribers.

Conclusion: Contract type, monthly charges, payment method, internet service, and tenure are major drivers of churn. Focusing on these areas can reduce customer attrition and improve long-term customer value.
